Typical rainwater gutters used in residential areas

CHEZY Rainwater Sump

The CHEZY 300mm Rainwater Sump offers a new stylish aesthetically pleasing and leak proof alternative to the traditional sumps and **allows for up to 3 incoming pipes.**

Our sumps prevent human errors and are crack resistant up to a depth of 1.25 meters. CHEZY sumps allow for single or multiple entry points for rainwater pipes. It is made of polypropylene and ABS and **can accommodate both 150mm and 110mm incoming and outgoing pipes (uPVC, VCP and HDPE Corrugated).**

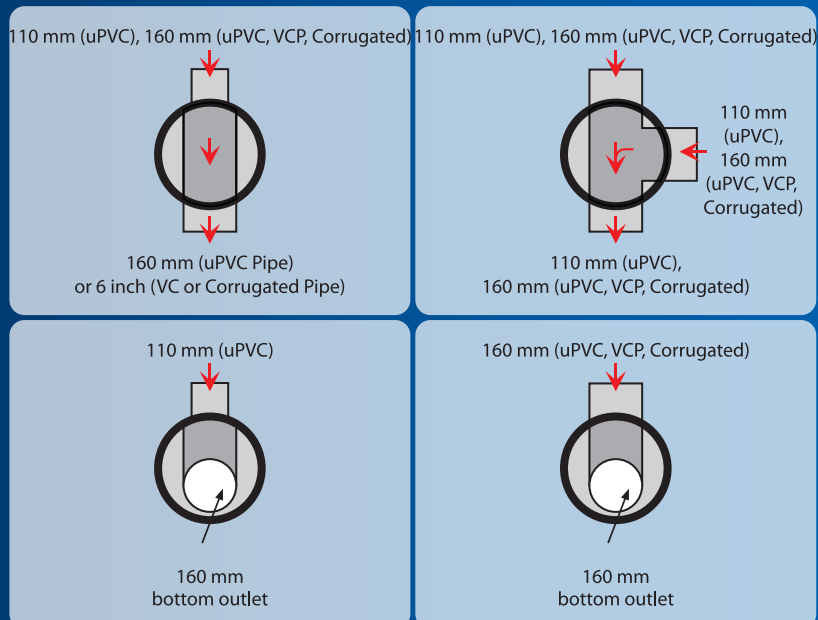

Together with the CHEZY Flexible Bend (110mm) all incoming pipe directions can be accommodated. Our rainwater sumps provide low hydraulic resistance and excellent flow characteristics. **They have full bore flow rates in excess of 200 gallons/minute (gradient 1:80) sufficient to handle heavy rainfall.**

The incline base design does not allow for any accumulation of water and you are ensured that CHEZY Rainwater Sumps **prevent mosquito breeding.**

Our Rainwater Sumps can be used buried in the ground or suspended and are ideal for residential, commercial, pedestrian areas, parks, gardens and golf courses.

The CHEZY Rainwater Sump gratings have been tested to BS EN 1253 for load ratings of up to 300kg
