Stop valves (stopcocks) for use in a building's plumbing system have become rather expensive with unscrupulous operators in their interest of reducing costs, use brass valves with high lead content (*this is especially true with cheap imported brass valves*). That is the reason why many brass stopcock suppliers do not provide test results to show that the material used in their manufacture is fit for use with water for human consumption.

The patented CHEZY Stop Valves complies with the rigid standards of BS EN 1213 for valves and uses *WRAS approved Nylon 6 (WRAS approved, a conformance mark that demonstrates the material complies with the high standards set out by the water regulations in the United Kingdom)*. Our Nylon 6 is used in all areas in contact with the water flowing through the valve, making the water safe for human consumption.

CHEZY Stop Valves have passed SIRIM tests to BS EN 1213 and is *extremely robust with high thread strength*. Size for size, tests have shown that our valves have the *lowest head loss and the highest flow rates* when compared to any other similar-sized stop valves available in the market.

The patented CHEZY stop valve can be used for both hot (70°C) and cold water applications (working pressure - 6 bar for hot water and 12 bar for cold water). Our valves have exceeded all tests conducted as per BS EN 1213.

Performance values of BS EN 1213 are as follows:

TORQUE TEST

15mm (½ inch)	10Nm
20mm (¾ inch)	15Nm
25mm (1 inch)	20Nm

BENDING MOMENT TEST

15mm (½ inch)	75Nm
20mm (¾ inch)	95Nm
25mm (1 inch)	150Nm

LEAK TIGHTNESS

60 seconds	16 Bar
------------	--------

PRESSURE RESISTANCE

10 minutes	25 Bar
------------	--------

FLOW CAPACITY

15mm (½ inch)	12 l/min
20mm (¾ inch)	24 l/min
25mm (1 inch)	42 l/min

ENDURANCE TEST

With a pressure between 2 Bar and 4 Bar (with the valve closed) and a flow rate of between 4 l/min & 6 l/min (with the valve open), repeat the above opening & closing for 10,000 cycles
